

Welcome to ACE Dialer

Your work phone, on your computer.

ACE Dialer lets you make and receive your work calls, send texts, hear voicemail, and chat with teammates — all from your laptop. No physical phone needed. Calls work from anywhere with internet.

Install the app

On a Mac

1. Download **ACE Dialer.dmg** from the link in your invite email.
2. Open the .dmg file (double-click).
3. Drag **ACE Dialer** to your **Applications** folder.
4. Open ACE Dialer from Applications or Spotlight (Cmd + Space → "ACE Dialer").
5. On first launch, macOS may ask for microphone permission. Click **OK** — calls need this.

On Windows

1. Download **ACE Dialer Setup.exe** from the link in your invite email.
2. Run the installer.
3. If Windows shows a blue "Windows protected your PC" screen:

- This is normal for a new app. - Click **More info** → **Run anyway**. - You'll only see this once.

1. The installer creates a desktop shortcut and Start Menu entry.

Sign in with Microsoft

1. Open ACE Dialer.
2. Click **Sign in with Microsoft**.
3. Your browser opens — use your normal ApTask@aptask.com account.
4. Approve any permission prompts your IT may have set up.
5. ACE Dialer takes over again and lands you on the keypad. You're in.

You only sign in once. Future launches go straight to the keypad.

Make your first call

1. On the keypad, type a phone number — or tap the contacts icon (top right) to pick from Recents.

2. Tap the green phone button.
3. To hang up: tap the red phone-down button.

During a call you can mute, hold, transfer, add a third person (3-way), and switch audio devices. Everything is on the in-call screen.

Receive a call

When someone calls your number, a full-screen ringer appears. You'll see three buttons:

- **Decline** — sends them to voicemail
- **Reply** — declines AND sends them a quick text (e.g. "On my way", "Can't talk, will text you")
- **Accept** — answers the call

If the app window is hidden, a small popup appears so you don't miss the call.

Find your way around

The bottom of the app has these tabs:

Icon	What it does
Keypad	Make calls, enter a number, dial extensions
Recents	Every call you've made or received. Tap a row to call back, or use the action buttons for SMS / favorite / block.
Messages	Two-way SMS / MMS with anyone. Send pictures, quick replies, attachments.
Voicemail	Listen, read transcripts (when available), reply with a call or text.
Favorites	Star contacts so they're one tap away. Favorites sync across all your devices.
Chat	Internal chat with other ACE Dialer teammates (no SMS charges).

The top-right avatar opens **Settings** — notification preferences, light/dark theme, blocked numbers, quick replies, hold music, and more.

Updates happen automatically

You don't have to do anything to stay current. About once per release, you'll see a banner at the top:

Update ready — Restart to install

Click the button when convenient. The app closes, installs the new version, and reopens. Takes about 10 seconds. **No re-download, no re-install, no SmartScreen prompts.**

Tips that save time

- **Microphone not working?** macOS → System Settings → Privacy & Security → Microphone → enable ACE Dialer. Windows usually auto-grants on install.
- **Calls drop or sound garbled?** Check the SIP status pill in the top-left of the app. Green dot = good. Yellow or red = your internet may be unstable.
- **Your DID number** (the number people see when you call) is shown in **Settings** → **Account**. If it's wrong, contact IT.
- **Quick replies** are SMS templates you can send with one tap. Edit them in **Settings** → **Quick replies**.
- **Block a number** from Recents (Ban icon on the row) or from a Messages thread (Ban icon in the header). They can't call or text you anymore.
- **Hold music** plays for the other party when you put them on hold. Upload your own clip in **Settings** → **Hold music**.

Need help?

- **Common how-to questions:** ask your IT team first
- **App bugs or feature requests:** email abdulla@aptask.com
- **"My account doesn't exist when I sign in"** — ping IT; they'll create your account.

Welcome aboard. You're now part of the ACE Dialer pilot.
